Ergonomic airless container emulates the touch of a finger

Finger Touch is Yonwoo's latest airless container for the precise application of sensitive formulas. Using Finger Touch is akin to using one's own finger to apply facial skincare products. It features a flexible, finger-shaped applicator and ergonomic actuator, making it easy to apply the product to the delicate eye area.

Available in 4ml, 5ml, 6ml, 10ml and 15ml capacities, it is ideal for eye treatments such as anti-wrinkle creams and serums. The unique shape of the applicator is perfect for precise application to local areas, while its rounded top is very smooth on the skin.

Finger Touch gives consumers total control over dosage, dispensing exactly 0.15cc per stroke.

Airless technology prevents contact of the formula with air, protecting the integrity and prolonging the shelf-life of the product. It also means that the pack can be used at any angle, allowing consumers to choose the most comfortable position.

The bottle, cap and actuator are made of recyclable polypropylene. This can help organic formulations seeking green credentials.

Finger Touch is fully leak-proof and available in small sizes, making it ideal for travel, too.

The bottle and cap can be decorated using silk screening and hot-stamping. The shoulder and actuator can be metallised and the whole pack can have a gloss or matt finish.
