Yonwoo's Twin Mix Airless

Hot on the heels of the twin chamber trend is Yonwoo's Twin Mix Airless. Now consumers can mix their skin treatment whenever they want, without hassle and in the correct dosage, all the while safeguarding formula integrity through Yonwoo's patented airless technology.

Ingredients such as Vitamin C, or Ascorbic Acid, are great for skin, but cannot be mixed into a serum or cream too long in advance before losing efficacy. Twin Mix Airless stores the ingredient in liquid or powder form, together with an activating agent, in two separate chambers.

To activate the treatment, consumers simply remove the ring seal, press down the top of the pump and shake to mix the two elements. Pressing the actuator then releases an exact 0.15cc dosage of the formula – particularly important with ingredients where incorrect doses can produce contrary results.

Twin Mix Airless is currently available in a 7ml capacity, with 1.5ml in the top chamber and 5.5ml in the bottle. Decoration options include silk screening, hot stamping, heat transfer and colour matching.

As with all airless pumps, the formula is protected from oxidation and external contamination, allowing less use of artificial preservatives. The dispensing method also draws up all of the product with virtually no waste.
