The airless dropper for precise dosing control

Cosmetics companies put much effort into their formulas. Facial treatments have never been more complex or multi-functional. The more advanced the formula, the more important the delivery system to ensure it performs exactly as it was intended. Yonwoo's Auto-Loading Dropper promises exactly that, offering a high-end airless solution for precise dosing control.

The 30ml dropper protects the formula using Yonwoo's airless technology, keeping out external contaminants and allowing less dependence on artificial preservatives.

Dosage is precise, at 0.32cc per stroke – no more, no less and exactly as prescribed. A pipette delivers the formula to the local area. The dropper's combined features are designed to complement the product, helping it to perform to optimum effect.

While the system is high-tech, its use is nothing but consumer-friendly. The pipette is automatically charged by closing the screw cap; pushing the actuator releases the product.

Check out the Yonwoo Auto-Loading Dropper in our catalogue.
